

Advanced Chemical Technology
River Avenue and E. State St.
Camden, New Jersey
Camden County

Advanced Chemical Technology, ACT, a plastic drum manufacturer, was found responsible for on-site contamination after selling the facility to Russell-Stanley Corp. Samples revealed high levels of petroleum hydrocarbons and lead at the loading dock and the dumpster area. ACT removed and disposed of 382 tons of contaminated soil, but a subsequent investigation revealed the presence of contaminated soil still on site.

After numerous attempts to obtain a final clean-up plan from ACT failed, the case was referred to the Deputy Attorney General for legal action.

Due to the potential threat to potable groundwater and ACT's lack of cooperation, the site is assessed a medium priority.
